

Why do you want to restrict what I listen to on Satellite Radio? I pay for the service and the weather and traffic informatin are a vital part of my job. Being a truck driver, it is advantageous to know the conditions of the city or vicinity where I am going. Just because you can't control your own people doesn't mean you have the right to control satellite radio. I guess that you are going to try to control cable networks next. Do something constructive and leave law abiding citizens alone.

Sincerely,

Earl Goad
